## Experiment - 13 : Implement your own PING program

Aim : To implement a Ping program using Python to check the connectivity between source & destination host

Algorithm :-

(i) Get the destination IP address from user.
(ii) Send the request to destination.
(iii) Wait for response.
(iv) Calculate the response time.
(v) Display whether the host is reachable.
(vi) Repeat the process for a few request.

Code :-

```
import os
import time
host = input ("Enter host : ")
for i in range (4):
    start = time. time ()
    result = os. system ("Ping -n 1" + host + ">null")
    end = time. time()
    if result == 0:
        print ("Reply from", host, "time = ",
               round ((end - start) * 1000, 2),
               "ms")
```

```
        else :
            print ("Request timed out")
        time.sleep(1)
```

INPUT :-

Enter host : 127.0.0.1

OUTPUT :-

Reply from 127.0.0.1 Time = 1.23 ms

Reply from 127.0.0.1 Time = 0.98 ms

Result : The Ping program was successfully studied & implemented.
